Official technical documentation of the goods

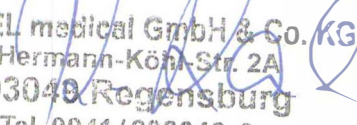

Preservation tank 1x2 (Basic)

Preservation tank made of stable, torsion-resistant construction made of brushed stainless steel (material number 1.4301). It has a cover plate with surrounding sealing. There is a shelf system on rails to store 2 bodies (max. 200 kg per shelf) inside the tank. The preservation tank is equipped with a hydraulic compressor (400V /50 Hz powerline) for automatic, smooth hydraulic control. All valves are operated with 24 V.

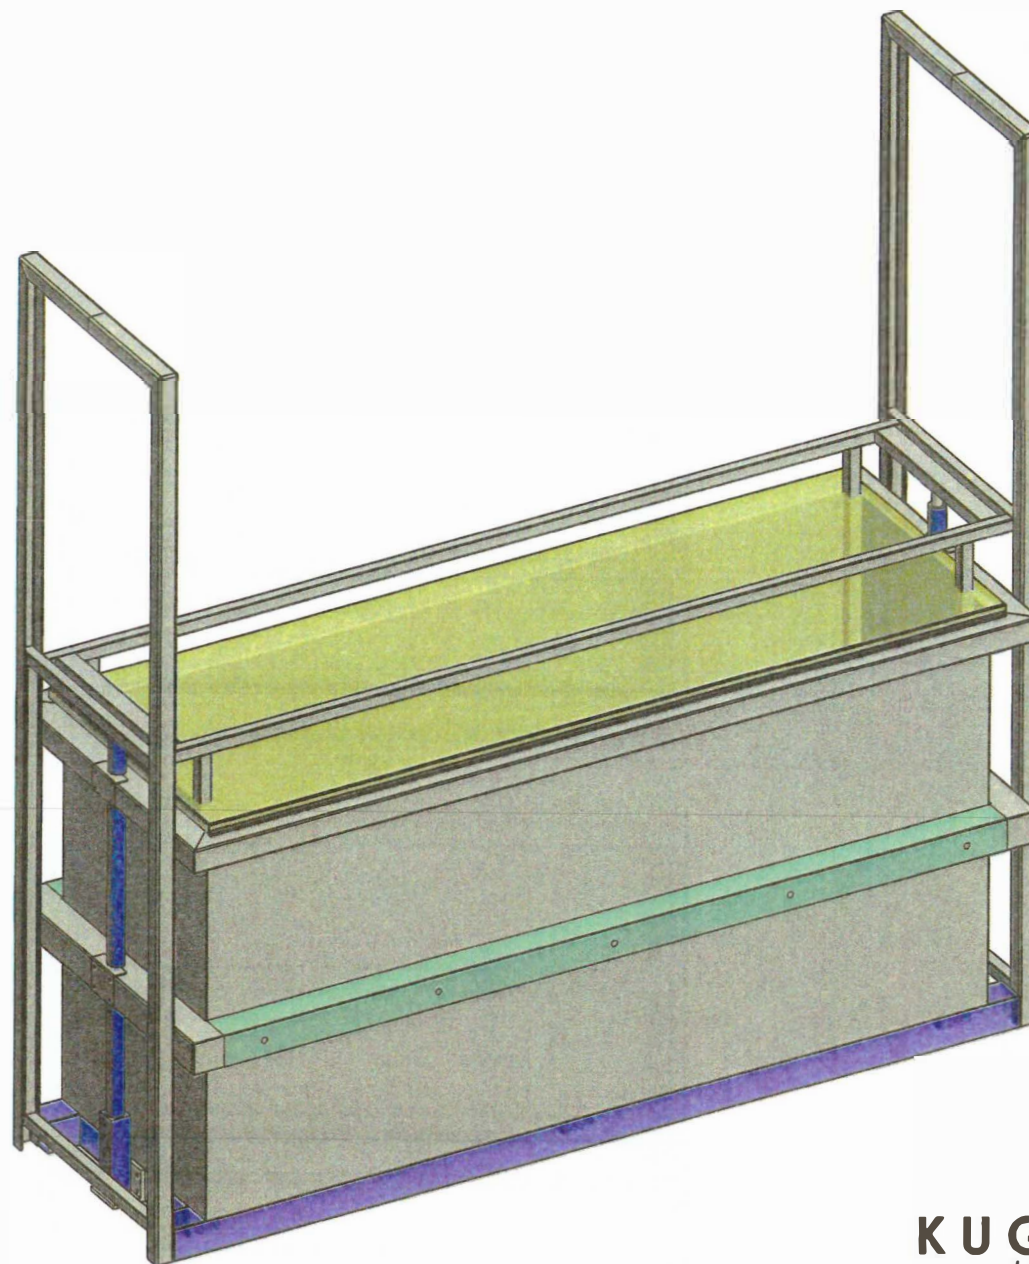

To open the cover plate the cylinder needs just 40-50sec. and runs on synchronized speed (max. 1% variation). The hydraulic oil is DIN-certified 510502, and pipes DIN-certified 2391-1-0, St 37.4 and DIN 1630 (1984-10). The flared joints are DIN-certified 3949 and hose pipes are DIN-certified 20022 25N / 25T. The hydraulic system is equipped with special 4-way flow dividers as well as a shut-off valve, a double break and a non-return valve to guarantee safe hold in every position of the height-adjustable tank.

The control unit has a safety switch according to DIN EN ISO 13849 -1/-2:2006 (safety of machines).

This preservation tank is a customized model.
